Conference Objectives

Upon completion of this program, attendees should be able to:

- List anatomical and physiologic differences of the pediatric patient.
- Verbalize when and how to use the Broselow tape.
- Describe how standardization of pediatric care can be achieved by the Broselow Color Coding Kids system.
- Describe key assessment factors of the pediatric patient in the ICU, OR, Ward and after discharge.
- Describe management of the pediatric patient in the ICU, OR, Ward, and after discharge.

Target Audience

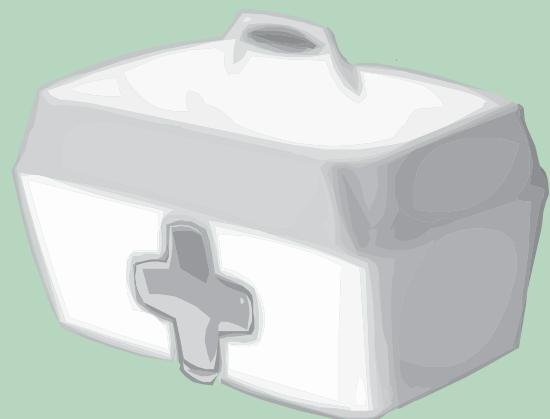

Physicians, Nurse Practitioners, Physician Assistants, First Responders, Nurses, and anyone interested in the care of pediatric patients.

Presented by:

St.Vincent Healthcare

U.S. Department of Health and Human Services,
Office of the Assistant Secretary for
Preparedness and Response (ASPR)

Care of the Pediatric Patient from Field to Home

February 25, 2008 • Mansfield Education Center • Billings, MT

Dr. Broselow graduated from Dartmouth College with honors in economics then decided to obtain his medical degree from NJ College of Medicine and Dentistry. He entered the field of family practice, in which he became board certified and practiced in Frankenmuth Michigan. He continued on to become board certified in Emergency Medicine. It was while working in the emergency department of a community hospital in Hickory, North Carolina, that he recognized how difficult and stressful it was for him and his team to care for acutely ill or injured children. He has conducted original research concerning the correlation between length and weight in children, from which the 'Broselow Tape' was born.

Jim Broselow, MD
